SUMMARY

Member of Technical Staff at Zoho with around three years on **Vani**, a real-time, infinite-canvas collaborative whiteboard used by a few thousand people daily. I work across the cross-platform editor (C++, WebAssembly, and JavaScript on the Skia rendering engine) and the server side (Java), maintain the Connectors module, and have built and shipped the product's AI features end-to-end.

EXPERIENCE

Member of Technical Staff — Zoho Corporation (Vani) 2023 – Present
Chennai, India · Client, Server & Editor Development

- Develop the editor for **Vani**, Zoho's real-time collaborative whiteboard, building features across C++, WebAssembly, and JavaScript.
- Helped migrate the editor's rendering from **SVG to a C++/Skia (WebGPU) engine**, improving in-browser performance by **~100–150%** and enabling a single codebase across web, macOS, and Android (Windows in development).
- Sole maintainer of the Connectors module** — designed auto-routing, object avoidance, distribution, rendering, and labels (C++/WASM/JS), plus a caching layer that cut connector update times from **~200–400 ms to ~100 ms** even with 100–200 connectors on a shape; review and gate all changes into release.
- Built and shipped Vani's **AI features end-to-end** (client and server in Java) — flowchart, ERD, and mind-map generation and text summarization via OpenAI and Zoho's internal model APIs; recognized with a special mention in the product's PR release.
- Own the **Board Activity** feature end-to-end (REST APIs and client), reconstructing each shape's past state by replaying its operations; and help bring an **agentic-whiteboard** capability to release, where an orchestrator drives an LLM through the editor's SDK to compose diagrams.
- Built **Vani-Labs**, an internal tool adopted across the team that patches code into VMs via **rsync** and runs database and automation tasks without a full build — removing the ~5–10 minute build wait.
- Review code within and beyond my module, mentor newer developers, conduct interviews, and write technical documentation.

TECHNICAL SKILLS

Programming Languages	C++, Java, JavaScript, TypeScript
Backend & APIs	Java, REST APIs, server-side development
Graphics & Rendering	Skia, 2D rendering, WebGPU, WebAssembly
Build & Tooling	Emscripten, CMake, Git, Docker
Real-time & Collaboration	WebSockets, Operational Transform (OT), CRDT
AI / LLM	LLM integration, OpenAI APIs, prompting, summarization
Web / Frontend	React, Next.js, Tailwind CSS, Node.js, HTML, CSS
Databases	PostgreSQL, MySQL, SQLite, Redis

PROJECTS & INTERESTS

- Build side projects with **Next.js**, **Prisma**, and **Tailwind CSS** to simplify everyday tasks.
- Explore open-source projects such as **Excalidraw**, **Supabase**, and **Payload CMS** to study how they're engineered.

EDUCATION

B.E. Computer Science and Engineering 2019 – 2023
Misrimal Navajee Munoth Jain Engineering College, Chennai · CGPA: 8.65

LANGUAGES

Tamil (native) · English (professional — read, write, speak) · Kannada (conversational)
